The application has been amended as follows:

1. (currently amended) A system for converting a message into a patternless encrypted message, wherein the message includes a plurality of message elements, ~~for use with computer hardware~~, comprising:

encryption software, ~~for use with computer hardware~~, which comprises an encryption substitution set, for converting the message into the patternless encrypted message, adapted to generate a table of substitutes for each message element, wherein the table is comprised of a plurality of randomly-generated set elements to be assigned to each of the plurality of message elements, and an encoding matrix which cross-multiplies the message elements, to generate the patternless encrypted message, and wherein the encryption software includes multiple shiftkey replacement;

memory, for storing the encryption software; and

a processor, for processing the encryption software.

16. (currently amended) A method of converting a message into a patternless encrypted message, wherein the message includes a plurality of message elements, ~~for use with computer hardware~~, in a system which comprises encryption software, ~~for use with computer hardware~~, which comprises an encryption substitution set, for converting the message into the patternless encrypted message, adapted to generate a table of substitutes for each message element, wherein the table is comprised of a plurality of randomly-generated set elements to be assigned to each of the plurality of message elements, and an encoding matrix which cross-multiplies the message elements to generate the patternless encrypted message, and wherein the encryption software

Art Unit: 2436

includes multiple shiftkey replacement, memory, for storing the encryption software, and a processor, for processing the encryption software, wherein the method comprises:

~~using the encryption software with computer hardware;~~

storing the encryption software in the memory; and

processing the encryption software in the processor, which includes:

encrypting the message into the patternless encrypted message by the encryption software which includes the multiple shiftkey replacement, including generating a table of substitutes for each message element, which includes

randomly generating each of the plurality of random set elements;

assigning each of the plurality of randomly-generated set elements to each of the plurality of message elements; and

cross-multiplying the message elements through the encoding matrix, to generate the patternless encrypted message.

28. (Currently Amended) The method of claim [22] 24, wherein the medium comprises the message language, and wherein calculating further comprises generating the table of substitutes wherein the number of substitutes for each element of the set in the multiple shiftkey replacement is a ratio of the frequency of each message element in the message language medium.

Art Unit: 2436

29. (Currently Amended) The method of claim [22] 24, wherein the medium comprises the message, and wherein calculating further comprises generating the table of substitutes wherein the number of substitutes for each element of the set in the multiple shiftkey replacement is a ratio of the frequency of each message element in the message medium.
